DETAILED ACTION

- Claims 1-11 have been examined.
- Claims 12-19 were previously cancelled in amendment filed 04/04/2005

Allowable Subject Matter

Claims 1-11 are allowed.

- In reference to claims 1

Independent claim 1 are allowed because the prior record fails to teach or fairly suggest a method of operation of a source node for selecting a restoration path in a mesh telecommunication network having a plurality of nodes comprising sending a first message along a service path to a destination node; receiving, in response to the first message, a second message from the destination node via a return path the second message containing an array storing a restoration link capacity for each link in the return path not in the service path wherein at least some of the nodes in the return path update the array upon receipt of the second message; selecting a restoration path through the network from the source node to the destination node using the array; and reserving resources for the restoration path in the network.

- In reference to claims 2-11

Claims 2-11 are allowed because they are dependent from claims 1.
